

RESINTINTOL

Code

1303

Description

Colouring paste with a high concentration of inorganic or organic pigments, depending on the colour, dispersed and milled in a suitable vehicle compatible with solvent - based paints or enamels and water - based products. « Resintintol » colouring agents are stable over time.

Use

By mixing the various dyes in the products, it is possible to obtain an infinite number of shades and tones that remain unaltered over time and do not give rise to flaming or flocculation.

Application

The product should not be used on its own but it is used to colour other paints, both water - and solvent - based.
Painting does not require any special precautions: it is done by a simple mixture of « Resintintol » and basic products.
The amount of product to be used depends on the colour you want to achieve. The normal percentage of use in the products does not exceed 5 % in a mixture. It is strongly recommended not to exceed the limit of 10 % (it may compromise the features of the base product).
